3. TECHNOLOGY FOUNDATION

Built for the Future Without Compromise

The DEEPROOTS Blockchain is purpose-built to support a new generation of decentralized infrastructure balancing speed, security, and scalability with a privacy-first design philosophy.

Core Principles

- **Proof of Seed (PoZ) -** A participation-driven model focused on long-term value, not short-term extraction

- **DRVM (Deep Roots Virtual Machine)** - A smart contract-ready environment powering all ecosystem logic

- **High Speed, Low Fees** - Engineered for global accessibility and mass adoption

- **Modular by Design** - Future-ready framework supporting scalable upgrades and layered innovation

- **Security First** - Governance and reward systems reinforced with multi-layer privacy and internal control protocols

Privacy-Centric Infrastructure

- No public access to internal validator or consensus layers (3-year privacy window)

- Smart contract libraries and execution logic remain confidential and IP-governed

- Access to developer tools, audits, or network modules requires approval and legal NDA

- System operations use multisig access, time-locked upgrades, and restricted deployment flows

DRVM: Deep Roots Virtual Machine

The custom smart contract engine built to serve DeWorld's decentralized economy.

- Smart contract ready

- Enables seeding rewards, referrals, NFTs, GameFi, and DeFi interactions

- Privately optimized for performance and adaptive ecosystem behavior

- All smart contracts are managed by Foundation-governed release protocols

Interoperability-Ready

The network is structured for future multichain collaboration while keeping security, privacy, and identity protections at the core.

No technical exposure. No public modules.
Full control maintained during Deep Roots' early growth phase.
